

# Pressure Pave

July 17, 2023

Brad Schmidt, Public Work Director

# The Process

Step 1: Pressure-inject modified crack-seal formula into cracks while applying final driving surface.

Step 2: Drive after 30 minutes.

1.

**Pressurized Crack Injection**

2.

**Water Resistant Membrane**

3. 

**2nd Seal / Driving Surface**

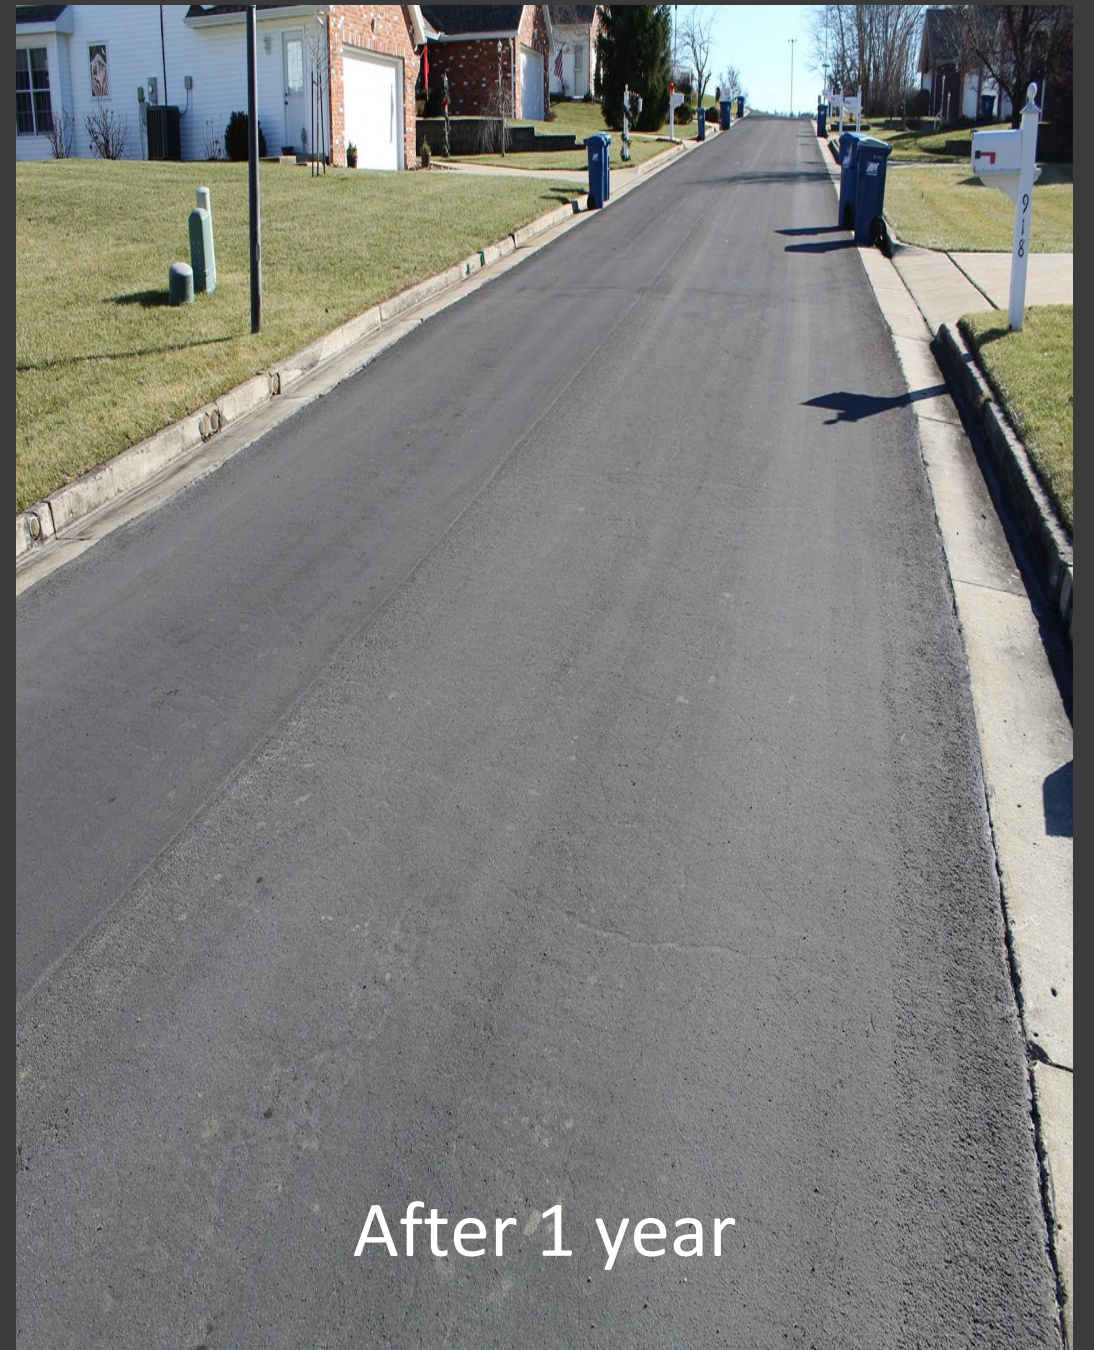

Chip or Scrub Seal –  
Relies on Gravity Fill

PressurePave –  
Forced Injection Fill

After 1 year

Irving, TX 2022

Kansas City

After 2  
Years

# Goals for Finished Surface

- 100% water impermeable
- Seal entire surface twice
- Create a ductile, self-healing membrane to mitigate effects of reflective cracking
- Stabilize broken pavement
- 100% of cracks are sealed (large and small)
